

Scenarios to be distributed to each group

Hello.  
Kindly read the  
following scenario,  
and help me answer  
my questions.  
Thank you

### SCENARIO 1

Cars queued up at Abu Hamour Petrol station. I started getting a headache from the strong smell of petrol fuel coming from the station's several different petrol pumps. Politely, I asked my father to close the windows, which helped a little but not entirely. We set off and I started thinking about how the petrol fuel releases into the air, and in what ways this might impact on our health and environment. Can you help me to identify these?

How are these issues minimized locally and globally?

What can we do to help in our homes or local area(s) that we live in?

## SCENARIO 2

I woke up to pray fajr (the early morning pray) and packed my school bag so it would be ready when my father drops me to school. Moments later, my mother came into my room and informed me that there's no school today. I asked her, "Why is there no school today, mom?"

She replied, "The school messaged to notify us according to severe weather warning alerts there will be thick fog, and the school will be closed today. They told us to remain indoors for our safety."

When I looked outside I could barely see our car, and I said to my mother, "Alhamdulillah, we are safe indoors."

"True, Alhamdulillah," sighed my mother.

I need your help. What issues or problems might fog have on our health and environment? Is fog a natural occurrence or a man-made source?

How are the two same or different? Can you provide some examples?

Hello.  
Kindly read the  
following scenario,  
and help me  
answer my  
questions.  
Thank you.

Hello, Kindly read the following scenario, and help me answer my questions. Thank you.

### SCENARIO 3

It was Jumah (Friday), and the family meal was cooking on the gas cooker. The aroma of the scrumptious dishes being cooked in the oven and on the gas hobs could be sensed from our bedrooms. Something that raised an eyebrow was about the gas consumption during cooking. Please help me to answer the following questions in as much detail and suggest as many ideas as you can. Where do the gases release to?

What Impact might this have on our environment and health?

What alternative solutions would you suggest to maintain a healthy sustainability environment?

Hello.  
Kindly read the  
following  
scenario, and  
help me answer  
my questions.  
Thank you

#### SCENARIO 4

When the weather became cooler, I visited Aspire Park with my family. It's so spacious and clean, Masha' Allah. I feel refreshed and healthy. My family opened the healthy picnic hamper box which they prepared at home. Inside were homemade sandwiches, fresh pieces of exotic fruits, fresh fruit juices, water, and Arabic coffee. We use recyclable cutlery as we believe in zero waste, Alhamdulillah. The luscious green trees, grass and clean lakes are the beautiful aspects of the park. I enjoyed playing football, riding on the swans in the lake, walking and playing in the playground. We even prayed our salah (Islamic prayer) together. I had so much fun and spending quality time in a clean, refreshing environment with my family was simply the best! Help me to identify what makes our environment clean and healthy? What amazing contributions has the country provided us with? Can you suggest some ways in which we can we contribute to sustain healthy parks, and environment?

Hello, Kindly  
read the  
following  
scenario, and  
help me answer  
my questions.  
Thank you.

## SCENARIO 5

Your next door neighbor is painting their home. You wonder how is it that you can smell the paint in your home. I need your help to tell me how the smell spreads in neighboring homes?

What impact does this have on our environment and health?

What steps or measures can be taken to minimize the paint fumes from spreading into the air and around us?

What alternative positive solutions might be available to sustain our environment and health?
